

Simplify your path to Dynamics 365 license compliance

Microsoft's enforcement of license compliance for Dynamics 365 Finance & Supply Chain begins in 2025. With this new enforcement measure, businesses must ensure they are right-sized—paying for only the licenses they truly need. Once the November 1st deadline is reached, if users are licensed incorrectly they will be blocked from signing into the application.

Managing user access, roles, and licensing within ERP systems like Dynamics 365 Finance & Supply Chain (F&SC) is a complex, ongoing challenge. As employees take on new responsibilities or shift roles, their access needs change, requiring regular updates to access to ensure alignment with their job functions. While Dynamics 365 supports granular, role-based security, the process of setting up and maintaining these roles across departments and users can be time-consuming and prone to errors. As a result, many users end up with more access than they need.

Within Dynamics 365, user security and licenses are tied together. The type of license purchased depends on the user's role and the features required. The more high-level entitlements a user has, the greater your organization's risk exposure.

However, right-sizing licenses is easier said than done as many organizations struggle to get a clear, unified view of who has access to what within Dynamics 365—and whether users are actually using that access.

Are you worried about how you'll reduce your risk and comply with Microsoft's license enforcement before the deadline?

Automated IT General Controls tools and reporting from Fastpath, now part of Delinea, can help you navigate this transition.

Licensing reports—now with Telemetry Data

Take the guesswork out of license analysis with enhanced licensing reports. Now powered by Telemetry Data, our reports provide real-time visibility into Dynamics 365 F&SC license usage, allowing you to see:

- Which licenses your users are actively utilizing
- Where costly inefficiencies exist
- How to optimize and reduce excessive and unnecessary license spend

Telemetry Data for Dynamics 365

As Microsoft moves forward with Dynamics 365 license enforcement, organizations need clear, reliable insights to ensure compliance and optimize costs. Fastpath Access Control enables centralized governance and automated monitoring of user access risk, including Segregation of Duties (SoD), across all critical business applications, from high-level controls to the most granular permissions. It provides detailed licensing reports at every level—user, role, duty, and privilege—giving organizations a complete picture of not only what licenses are required, but why they are required.

SOLUTION BRIEF

Simplify your path to Dynamics 365 license compliance

Additionally, Fastpath Access Control now integrates Telemetry Data for Dynamics 365, providing an unprecedented view into actual system usage.

This means organizations can quickly identify potential over-provisioning of licenses, and ensure that assigned licenses are actually being used. By incorporating real usage metrics, Fastpath Access Control helps businesses make informed decisions, avoid unnecessary costs, and align their licensing strategy with true operational needs.

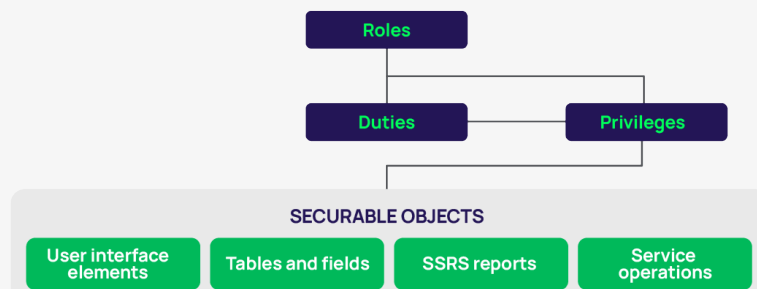

Using Fastpath Access Control's comprehensive reporting and data-driven insights, organizations can comply with license enforcement, reduce waste, and save money—all while maintaining efficiency within their Dynamics 365 environment.

Want to take control of your licensing? Fastpath, now part of Delinea, makes it simple.

Get the insights you need, when you need them.

No blind spots in security reporting

Fastpath Access Control reports go down to the lowest securable object level so you can make better informed decisions

Easily visualize user role assignments and actual usage to optimize license decisions efficiently with Fastpath Access Control.

Fastpath, now part of Delinea, provides advanced security solutions designed to enhance security posture and simplify compliance processes. With centralized, cloud-based IT General Controls (ITGC), including Segregation of Duties (SoD), Fastpath enables businesses to efficiently manage and secure identities, enforce robust access controls, and track changes in data across critical business applications. Fastpath provides user-friendly security tools that deliver rapid results, helping organizations streamline their security, audit, and compliance workflows. As part of Delinea, Fastpath improves visibility and ensures comprehensive control over the entire IT ecosystem, empowering organizations to maintain robust security and compliance with ease and efficiency.
